DETAILED ACTION

1. This Office Action is the answer to the amendment received on 3/15/06.

Status of the claims

2. Claims 1-19 are pending.

Drawings

3. Formal drawings (in 5 pages) were acceptable by the examiner on 3/24/05.

Allowable Subject Matter & Reasons for Allowance

4. Independent claims 1 and 11 are patentable over closest references of Sudolsky and Goebel et al. because they do not anticipate nor fairly and reasonably teach a system, or a method for monitoring, reporting and diagnosing fault information of a vehicle on a real-time basis both within the vehicle and outside the vehicle, besides other limitations, comprising:

- a portable hardware component that is removable from the vehicle and that uses information fusion and onboard reasoning processing within said portable hardware component to provide diagnosis, prognosis, isolation associated with the recorded fault information.

The primary reference of Sudolsky does not suggest a system for real-time diagnosing fault information, that task is only performed after a mission flight is accomplished; Sudolsky also does not teach an Electronic Flight Bag (a standard tablet PC that meets FAA criteria as a Class 2 device) as the portable hardware component.

5. Dependent claims 2-10, and 12-19 are allowed because they are dependent on allowed claims 1, and 11.
